

# Completions and Well Architecture

Unlocking Complexities

# A Valuable Partner in Production

The time and cost associated with drilling oil and gas wells can be substantial, particularly as the landscape becomes increasingly more complex. Frank's International is the leading oilfield services partner – providing the innovative equipment and smart solutions for running tubulars to maximize value.

Frank's completion capabilities apply the engineering expertise and customized solutions to bring the most complex wells into production more efficiently.

We specialize in corrosion resistant alloy running operations, and have developed a patented product line designed to handle these critical materials, offering the industry's only true non-marking tubular running solution.

Our integrity and absolute commitment to providing quality products and services to our customers reduces well costs over time.

## Products Designed to Increase Reliability

Frank's enables more reliable well operations and safer working environments. Since we design and manufacture our own products, our customers benefit from reduced downtime and costs.

As specialists in corrosion resistant alloy tubulars, we inherently understand the importance of maintaining their stability. Conventional gripping systems create stress marks and indentations that accelerate corrosion, reducing dependability and increasing the chance of pipe body failures.

Frank's has specifically designed several solutions to help our customers optimize production and assure long-term success. We have developed a product line that includes our patented FluidGrip® technology and the Collar Load Support (CLS) system. This system eliminates die penetration marks, mitigating concerns of corrosion and prolonging the stability of the well.

Frank's offers an array of completion tools and equipment designed and manufactured to meet the needs of our customers globally.

Our equipment, solutions and installation teams have the ability to complete the most complex wells, regardless of application, safely and reliably.

### Workover Services Extend the Life of a Well

After years of production, oil and gas wells require extensive maintenance and replacement. Frank's expertise can be applied to complex workover projects, resulting in the restoration of well vitality and extending its production life.

With equipment that has proven to meet the rapidly evolving needs of the oil and gas industry, our advanced technology and specialized tools enable the company to meet the challenges of all workovers. Over the renewed lifetime of the well,

customers will minimize costs and reduce non-productive time, thanks to the reliability of our equipment and service provided by our teams.

### Control Line Management

Taking care to maintain the wellbore and completion accessories is a critical aspect to the longevity of the well lifecycle.

Our engineers and operational specialists work together to develop equipment designed specifically for installing complex completion tubulars and associated components that extend the life of the well, safely and efficiently.

Frank's manufactured Rotary Mounted Completion Spiders are uniquely designed to accommodate the pass-through of downhole deepwater completion components. When coupled with

Frank's Cobra Control Line Management system, our customers are provided with the ultimate production and management for their control lines and umbilicals.

Frank's is the leader in deepwater completion services, providing customers with high-quality, innovative equipment and superior services. We deliver customized solutions for our customers' challenges to help ensure safer working environments, decreased non-productive time and a lower total cost of ownership.

Founded in 1938, Frank's International, N.V. is publicly traded on the NYSE under the symbol FI. With a diverse, global workforce spanning over 60 countries across the globe, Frank's is an industry leader in engineering, manufacturing, servicing and installing tubular running products. Frank's understands the importance of providing consistent performance and exceeding our customers' expectations. The company provides learning and development opportunities to create a cross-functional workforce, adept at providing world-class service and exceeding the needs of customers while they expand their search for oil and gas. The company is proud of its grassroots heritage, and today embraces the same entrepreneurial and innovative approach for which the company was founded.
