

Tubular Products and Fabrication

Unlocking Complexities

Custom Solutions, Unsurpassed Value

As one of the largest tubular services companies in the world, Frank's International provides quality products and solutions to improve the safety and reliability of complex drilling projects. We utilize our extensive knowledge and experience to solve our customers' toughest drilling challenges, enabling them to efficiently access oil and gas in any environment.

Dedicated to service and long-term partnerships, we create customized solutions using our advanced technologies and engineering expertise to minimize the total cost of ownership over the life of the well. Our customer-driven solutions, combined with our extensive custom fabrication and hammer installation capabilities in locations around the world, enables us to deliver exactly what our customers need, wherever they operate.

Extensive Inventory, Extreme Performance

Frank's holds one of the largest inventories of large-diameter and high-yield tubulars. We also supply the oil and gas industry with high-performance connectors and advanced welding technology for conductors, surface casing and Top Tension Riser systems.

Our high-performance connector product line includes the Double Drive Shoulder™, Tencom™ and Xtreme3™ connectors.

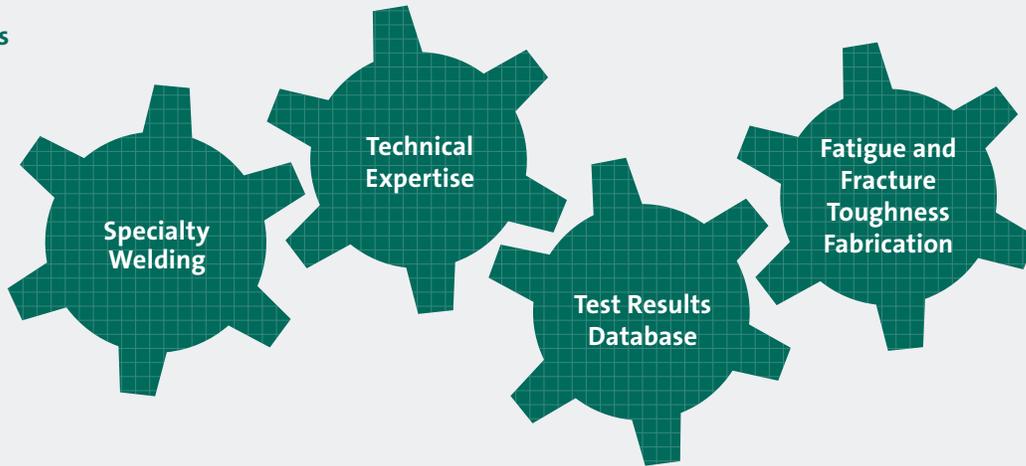

Our Double Drive Shoulder™ (DDS) is a low-cost, high-strength, drivable connector that is releasable, retrievable and reusable. The DDS is designed with a flush connection to the pipe's outside diameter and inside diameter with a wall thickness of 1" or larger.

The Tencom™ connector is designed for tension and compression. It has a deep-stab, tapered thread, and self-aligning pin

and box to prevent cross threading. The Tencom™ connector requires low torque make-up, has a positive stop shoulder and is suitable for driving applications.

Our premium Xtreme3™ connector is designed for rigorous applications that demand superior performance and reliability. True to its name, this connector withstands extreme tension, extreme compression and extreme bending.

Total Solutions

Deepwater Fabrication Solutions

With a relentless focus on total solutions, Frank's has pioneered tubular fabrication solutions for more than two decades. We were the first tubular service company to fabricate Top Tension Risers (TTR) for the Gulf of Mexico and are considered the world's leader in TTR. Our unrivaled custom tubular fabrication facility in

the Port of New Iberia, Louisiana, is strategically located for fast and efficient delivery to customers worldwide.

We fabricate tubulars to meet stringent fatigue and fracture toughness applications, and put special emphasis on the structural fabrication of complex subsea well-head hardware and Pipeline End

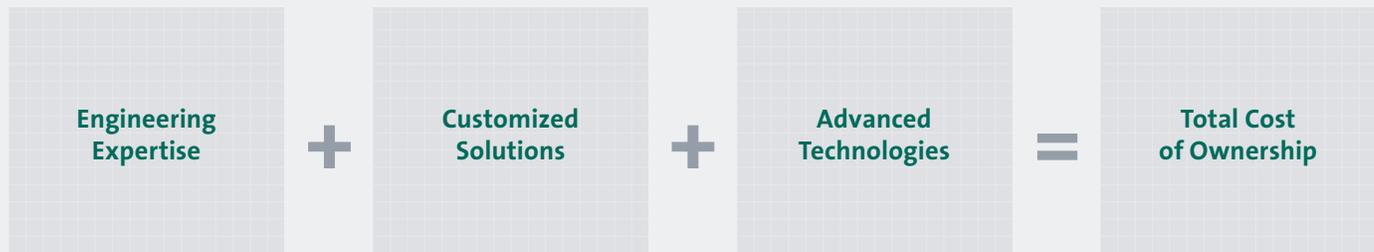

Terminations (PLETs). While our high-tech welding services exceed the standard for welding applications and we have received a multitude of international credentials and recognition, we remain steadfast in our commitment to excellence and consistently work to advance our standards.

Reliable Quality and Safety

With specialty welding capacities, state-of-the-art equipment, and an extensive database of fatigue and fracture test results, Frank's is uniquely positioned to deliver the precision and performance

that is vital to onshore and offshore operations. Our technical knowledge and expertise in pipe, connectors, fabrication and logistics contributes to the success of our customers' projects.

Combining our high standards with our highly skilled and experienced personnel, we keep our customers operating safely and efficiently while maximizing value and minimizing costs.

Unlocking Complexities

Founded in 1938, Frank's International, N.V. is publicly traded on the NYSE under the symbol FI. With a diverse, global workforce spanning over 60 countries across the globe, Frank's is an industry leader in engineering, manufacturing, servicing and installing tubular running products. Frank's understands the importance of providing consistent performance and exceeding our customers' expectations. The company provides learning and development opportunities to create a cross-functional workforce, adept at providing world-class service and exceeding the needs of customers while they expand their search for oil and gas. The company is proud of its grassroots heritage, and today embraces the same entrepreneurial and innovative approach for which the company was founded.
